Quarterly report

This is a sample document. It is here so you can see your page style, fonts, header and footer on a real PDF while you choose them. Your own documents are not changed.

Summary

Revenue grew for the third quarter in a row. The team shipped two releases, closed the oldest support tickets and cut the build time in half.

- Releases: **2**, both on schedule
- Support backlog: down from 41 tickets to 12
- Build time: 9 minutes, was 18

> Headers and footers repeat on every page. Page numbers update by themselves.

Figures

Month	Revenue	Change
July	41,200	+4 %
August	43,900	+7 %
September	47,300	+8 %

A little code

```
function total(rows) {
  return rows.reduce((sum, row) => sum + row.revenue, 0);
}
```

Next quarter

The plan for the coming months is short on purpose.

1. Finish the migration started in August.
2. Publish the new documentation.
3. Keep the support backlog under 15 tickets.

Notes

Text in a document like this one is mostly paragraphs, so this page has one more. It shows how line length, spacing and margins feel when there is a full block of prose on the sheet rather than a list or a table.
